

DIGITAL MONITORING SYSTEM

TURN YOUR PC INTO A VIDEO SECURITY SYSTEM WITH DIGITAL RECORDING AND REMOTE MONITORING CAPABILITY

MONITOR YOUR HOME AND BUSINESS

Now you can easily turn your PC into a video security monitoring system with the Lorex Digital Monitoring System. The Lorex Digital Monitoring System and DMRS 1.4 application software allows you to view up to four locations simultaneously on your PC. By loading the software on a second PC, you can now access the camera image remotely for total security protection.

DM1440

... WITH PC SURVEILLANCE

If movement is detected when using the motion sensor option, an alarm will sound to alert you of potential trouble. With Lorex Digital Monitoring System, you can program your system to automatically call the telephone, cellphone or pager number, which you have designated, or digitally record the picture to the PC's hard drive. View, setup and configure the video security cameras from a remote computer location using standard internet or modem connection to monitor and protect your business or home from across town or around the world.

- Digital Recording to Computer's Hard drive
- View up to four locations simultaneously
- Remote Security Monitoring by Computer
- Individual selection of security alarm features
- Digital freeze and zoom-in options (when using DMRS Viewer)
- Password security protection
- Remote Digital Monitoring

DIGITAL MONITORING SYSTEM

SELECT VIEWING OPTION

View up to four camera locations simultaneously, sequentially rotate between up to four camera locations or view one camera location in full screen. Digital Monitoring system also allows the user to individually set and configure each camera location. Use the password protection option to secure your PC from unauthorized use.

CALL PHONE OR PAGE

Set security alarm features including motion sensor, timer, alarm and record functions. When the alarm feature is activated, the system will automatically dial the telephone number, which you have selected, and play a personalized alarm message.

CELL PHONE

PAGER

TELEPHONE

In an emergency the system will alert you remotely by telephone, cell phone or pager.

RECORD DIGITALLY

Digitally record video images to your PC or save the video image as a JPEG file. Digital recording quickly accesses and searches for a specific time segment without the need for reviewing an entire video. The selectable record feature allows you to record images at a specified date and time.

VIEW REMOTELY

View, set up and configure the four individual locations from a remote location, using standard TCP/IP or modem dial up option, to monitor and protect your Business, Office or Home. Use DMRS viewer to digitally freeze & zoom-in on a particular location. Digital monitoring system also enables the user to digitally record directly to the remote computers hard drive providing continuous recording while connected to the main computer.

MINIMUM SYSTEM REQUIREMENTS:

- Pentium II 350 MHz processor or faster
- 64 MB RAM memory
- Windows 98 / ME
- 24 Bit or higher VGA card
- At least 33,600 bps or faster voice modem
- 800 x 600 high color display
- 8 bit or higher PCI sound card
- CD Rom drive required for software installation
